

Evaluation of FMP presentation

I believe that my presentation went very well, it was presented in a confident manner and contained most of the relevant facts and information, however it was difficult to act upon my peer feedback as it did not make much sense.

The feedback claimed I was not including a community although my project is set solely in and around Bradford, this confused me as I was not sure how exactly to alter my project accordingly.

In terms of self-assessment feedback, I believe that I should have covered slightly more in my presentation such as reflection methods and the checkpoints I will place within the project to track my progress accurately and efficiently, I think not outlining these in my presentation was a mistake and could have added extra context to my idea.

I also think I should have potentially added more of an explanation on the research I will be conducting as I did not cover this in much detail, however this was impacted by me still being slightly indecisive on what methods of research to use, I believe I should have at least mentioned this within my presentation.

I didn't mention reflection much in my presentation which was also a small mistake, however this was slightly rectified because at the end of the presentation I was questioned and managed to explain exactly how I will be reflecting on this project and the checkpoints I will set in order to do so.
