UAL Level 3 Diploma in Creative Media Production & Technology

Editing Reflection

My Experience:

Using Adobe Premier Pro, I had a fun experience. It was very exciting and enthusiastic. It was very fun to be able to explore the different techniques in editing and learning how you can make a movie by taking and cutting shots and making a little film. It was a great experience to be able to learn something new. During this experience of using Adobe Priemer Pro, it has made me understand how much time and effort go in all these movies, films, adverts and 2-minute videos, it has made me really appreciate and respect people who edit as I have now learnt how patient you need to be when editing so the video runs smoothly.

Using Adobe Premier Pro, I edited 3 given shots of a film that was based in an office base. In the given 3 shots they all have a different shot of the given scene, in one shot it was based on both talking and their actions, the other was on a guy in a green shirt and the other was mostly focusing on the blue shirt guy.

So first I downloaded the 3 videos through google drive and uploaded them on my desktop. Then I opened Adobe Premier Pro and clicked on 'New project...' this then led me to a screen where it wanted a title name and a few more details. So, I inserted a title 'The Dead Boss' Then I changed the location from documents to desktop by clicking the 'browse' button. Followed with the 'ok' button. I found this part of the work simple and easy to understand.

What I feel like they should improve:

I have no bad feedback as using this app was fun and great and I really enjoyed it. So, I don't have much to say about things they should change or improve. But I would say if they made it somehow easier to make the noise run smoothly without any glitches than us rather manually going after every second rewinding and forwarding to sort out the glitches, making sure it sounds and runs smoothly.
