Skills Assessment of Skills/Progress

professional skills, strengths and areas for development

Identify skills developed through the course and your personal time:

- Independent
- Creativity
- Time management
- Problem-solving.

Strengths with the skills:

What role I have done confidently in this whole course was being a director and scriptwriter. My strengths are all in vision media. Even if it is a short film or animation or graphic design. I feel more confident when in this field than in any game field. I know what I'm doing and can expand my skills when in the film and editing field then when I find myself in the game field. I personally think I have strengths in my confidence skills, my communication skills, organizing and practical.

Areas to develop ideas:

The areas I need to develop in this course include drawing skills, teamwork skills, illustrating. I want to expand my skills and independence skills on the software Adobe animate and Adobe after-effects. These programmed helps expand confidence when making motion or visual effects.
