

Person in a Bottle

- You will need to produce a good quality image of a clear glass bottle, or similar, against a white background.
- You will also need a full-length photo of someone, against the white backdrop in the photo studio so that it is easy to cut out in Photoshop.
- The example (right) was created quickly, you can do much better.
- Think about the pose you want your model to have – perhaps they could be looking as if they were leaning against the inside of the bottle or trying to escape. It's up to you.
- A demo' will be given to guide you through the process using Photoshop.
- Print screen as you work to evidence how you created your image and post this to your PowerPoint.
- You may wish to develop this idea further in your project work (exploring different backgrounds for example).
